

DATA SCIENCE

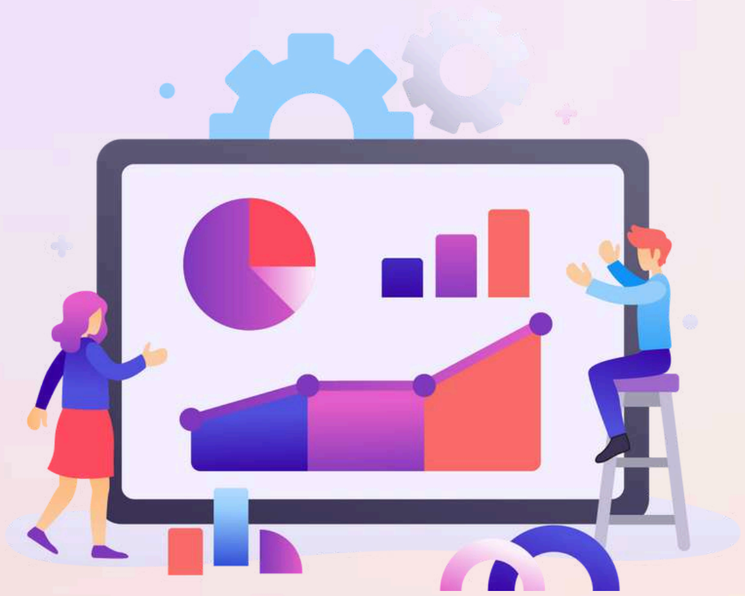

Data science is the study of data to extract meaningful insights for business. It is a multidisciplinary approach that combines principles and practices from the fields of mathematics, statistics, artificial intelligence, and computer engineering to analyze large amounts of data.

About the Program

The Data Science program by NYERAS is designed to equip learners with the skills to analyze, interpret, and visualize data effectively. Combining theoretical knowledge with hands-on experience, the program prepares students to excel in industries like finance, healthcare, technology, and e-commerce by solving real-world problems using data.

Key Features of the Program

Comprehensive Curriculum:

Covers foundational to advanced topics in Data Science.

Industry-Relevant Tools:

Training in cutting-edge technologies and software

Capstone Projects:

Real-world projects to demonstrate mastery.

Flexible Learning Options:

Online and hybrid modes available.

Mentorship from Experts:

Learn from experienced data scientists and professionals.

Career Support:

Resume building, interview preparation, and job placement assistance.

THE Roadmap

Module 1

Introduction to Data Science

Module 2

Statistical Foundations

Module 3

Data Manipulation and Analysis

Module 4

Machine Learning Basics

Module 5

Advanced Machine Learning and AI

Module 6

Visualization and Storytelling

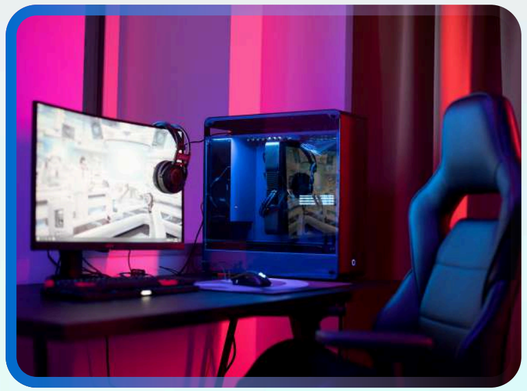

Module 7

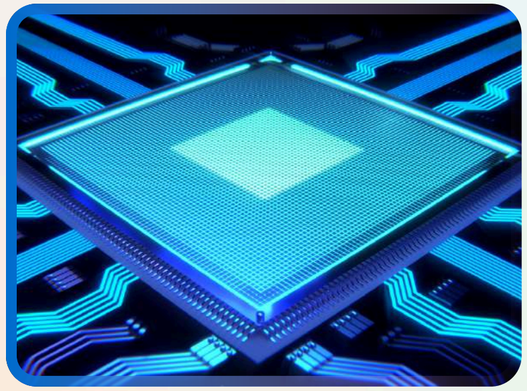

Capstone Project and Deployment

Course Curriculum

- Introduction to Data Science
- Statistics and Probability
- Data Handling: SQL, data wrangling, and cleaning
- Programming for Data Science: Python and R basics
- Machine Learning: Supervised and unsupervised learning
- Deep Learning: Neural networks and frameworks like TensorFlow
- Data Visualization: Tableau, Power BI, and Matplotlib
- Big Data Tools: Introduction to Hadoop, Spark
- Capstone Project: A project that simulates real-world challenges

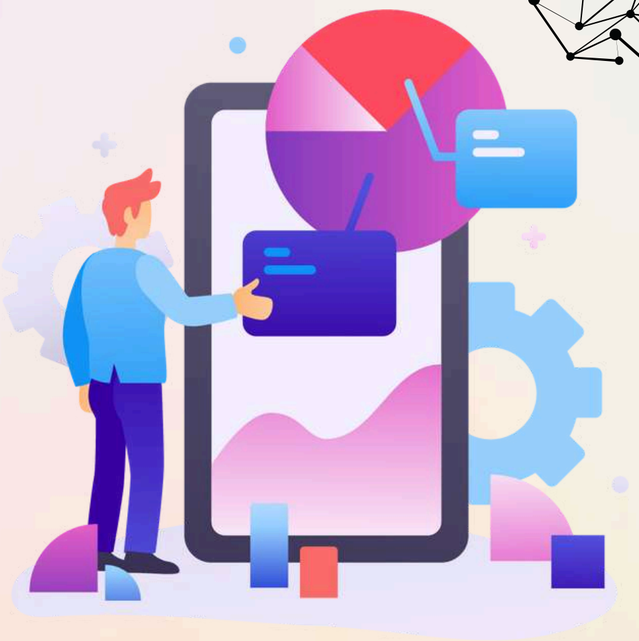

Tools

- Python
- R
- SQL
- Pandas
- NumPy
- Scikit-learn
- TensorFlow
- Keras
- Tableau
- Power BI
- Hadoop
- Apache Spark
- Jupyter Notebook.

Projects

- E-commerce Recommendation System: Build a product recommendation system.
- Customer Churn Prediction: Identify customer attrition patterns.
- Health Analytics: Predictive modeling in patient care.
- Financial Forecasting: Time-series analysis for stock market prediction.
- Image Recognition: Develop a model for image classification.
